

packages/graph-core/src/__tests__/domain-normalize.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:51:09.583Z

Overview

A new test file `packages/graph-core/src/__tests__/domain-normalize.test.ts` (lines R1-R46) was added. It imports `vitest` helpers and `normalizeNodeId` from `../analyzer/normalize-graph.js`.

Key changes

- **Imports:**
 - `import { describe, it, expect } from "vitest";` (R1)
 - `import { normalizeNodeId } from "../analyzer/normalize-graph.js";` (R2)
- **Domain node test:**
`normalizeNodeId("domain:order-management", { type: "domain", name: "Order Management" })` → `"domain:order-management"` (R6-R10)
- **Flow node test:**
`normalizeNodeId("flow:create-order", { type: "flow", name: "Create Order" })` → `"flow:create-order"` (R14-R18)
- **Step node tests:**
 - With `filePath: "step:create-order:src/validators/order.ts:validate"` (R22-R27)
 - Without `filePath: "step:validate"` (R30-R35)
 - Bare step name with `filePath: "step:src/validators/order.ts:validate"` (R38-R44)

Impact

Adds explicit coverage for `normalizeNodeId`, making changes to the helper immediately visible through test failures.

Risks & follow-ups

- **Regression risk:** Refactoring `normalizeNodeId` may cause these tests to fail; run the full suite after changes.
- **Test fragility:** Tests depend on exact string outputs; any change in ID formatting conventions will require updates.
- **Coverage gap:** Only current ID patterns are exercised; consider adding edge cases (e.g., empty names or unsupported types) if the function evolves.
