

packages/graph-core/src/__tests__/domain-persistence.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:52:02.868Z

Overview

A new test file `packages/graph-core/src/__tests__/domain-persistence.test.ts` (added lines 1-6) validates the domain-graph persistence helpers. It imports `vitest` utilities, Node `fs`, `path`, `os` modules, and the persistence API (`saveDomainGraph`, `loadDomainGraph`) from `../persistence/index.js`. The test uses the `KnowledgeGraph` type from `../types.js`.

Key changes

- **Test setup*
 - – `testRoot` is defined as `join(tmpdir(), "ua-domain-persist-test")` (line 8).
- **Lifecycle hooks*
 - – `beforeEach` (lines 36-39) removes any existing `testRoot` and recreates it; `afterEach` (lines 41-43) cleans it up.
- **Sample graph*
 - – a minimal `KnowledgeGraph` (`domainGraph`, lines 10-33) contains one domain node (`id: "domain:orders"`).
- **Persistence tests*
 - –
 - `saves and loads domain graph` (lines 45-50) checks that `loadDomainGraph` returns a graph with
