

packages/graph-core/src/__tests__/ignore-generator.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:55:44.607Z

Overview

A new test file `packages/graph-core/src/__tests__/ignore-generator.test.ts` (lines R1-162) was added to validate `generateStarterIgnoreFile`. The suite checks header content, directory-based suggestions, generic test-file patterns, and integration with an existing `.gitignore`.

Key changes

- **Imports** – added `vitest` helpers, `generateStarterIgnoreFile`, and Node `fs`, `path`, `os` modules (R1-R5).
- **Test harness** – `beforeEach` creates a unique temp directory `tmpdir()/ignore-gen-test-${Date.now()}`; `afterEach` removes it (R10-R17).
- **Header checks** – asserts presence of `.novadiffignore`, a reference to `.gitignore`, and “Built-in defaults” (R19-R23).
- **Directory suggestions** – verifies commented suggestions for existing directories (`__tests__`, `docs`, `test`, `tests`, `fixtures`, `examples`, `.storybook`, `migrations`, `scripts`) and that non-existent ones are omitted (R26-R96).
- **Generic test patterns** – ensures `*.snap`, `*.test.*`, and `*.spec.*` are always suggested (R84-R88).
- **.gitignore integration** – tests inclusion of uncovered patterns, deduplication, comment/blank-line skipping, trailing-slash normalization, and omission when all patterns are covered (R98-R153).
- **Section omission** – confirms no “From .gitignore” section appears when absent or fully covered (R144-R153).

Impact

The added tests provide concrete coverage of ignore-file generation logic, making regressions in header formatting, directory detection, or `.gitignore` handling immediately visible.

Risks & follow-ups

- **Parallel test flakiness** – `Date.now()` may produce duplicate directories; consider a UUID suffix.
- **Cleanup reliability** – `rmSync(..., { recursive: true, force: true })` should always delete the temp dir; a final existence check could guard against failures.
- **Future default changes** – if built-in defaults evolve, corresponding assertions (e.g., header text, generic patterns) will need updating.
