

packages/graph-core/src/__tests__/language-lesson.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:56:14.289Z

Overview

A new test file `packages/graph-core/src/__tests__/language-lesson.test.ts` (lines 1-157) has been added. It imports Vitest helpers, the analyzer functions (`buildLanguageLessonPrompt` , `parseLanguageLessonResponse` , `detectLanguageConcepts`), the `GraphNode` / `GraphEdge` types, and the TypeScript language config. Sample graph data (`sampleNode` , `sampleEdges`) is defined to exercise the utilities.

Key changes

- **File added:** `packages/graph-core/src/__tests__/language-lesson.test.ts` .
- **Imports:** Lines 1-8 bring in Vitest, the analyzer exports, type definitions, and the TypeScript config.
- **Sample data:** Lines 10-36 create a realistic node and edge set.
- **Prompt tests** (lines 38-77): Verify that `buildLanguageLessonPrompt` includes the node name, summary, target language, relationship context, and requests JSON output.
- **Response parsing tests** (lines 79-120): Confirm that `parseLanguageLessonResponse` correctly parses raw JSON, extracts JSON from code blocks, and returns an empty result for invalid input.
- **Concept detection tests** (lines 122-156): Ensure `detectLanguageConcepts` identifies async patterns, middleware patterns, and returns an empty array when no concepts are present.

Impact

- **Coverage:** Adds unit tests for prompt construction, response parsing, and concept detection, helping catch regressions early.
- **Maintainability:** Future changes to the analyzer functions will be validated against these tests, reducing silent failures.
- **Observability:** Test failures will surface missing or incorrect exports, import paths, or configuration changes.
- **Performance:** Tests are lightweight; no measurable impact on build times.

Risks & follow-ups

- **Import errors:** If `../analyzer/language-lesson.js` or `../languages/configs/typescript.js` do not export the expected symbols, tests will fail.
- **Snapshot drift:** Prompt formatting changes may require test updates; run tests locally to confirm.
- **Edge case coverage:** Tests cover typical scenarios but not all edge cases (e.g., large graphs); consider expanding coverage if needed.

- **Type mismatches:** Ensure `GraphNode` and `GraphEdge` types align with the sample data; mismatches will cause type errors during test compilation.
