

packages/graph-core/src/__tests__/plugin-registry.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:59:25.648Z

Overview

A new test file `packages/graph-core/src/__tests__/plugin-registry.test.ts` (lines 1-228) was added.

It imports `vitest` helpers, `PluginRegistry`, `registerAllParsers`, and types `AnalyzerPlugin`, `StructuralAnalysis`, `ImportResolution`.

A helper `createMockPlugin` (lines 13-20) constructs a stub `AnalyzerPlugin` with default `analyzeFile` and `resolveImports` implementations.

Key changes

- **Imports** added at the top of the file (R1-R4).
- **Mock plugin factory** (`createMockPlugin`) returns an `AnalyzerPlugin` with stubbed methods (R13-R20).
- **Behavioral tests** (R22-R194) cover:
 - registration, lookup by language and file extension, language mapping, and priority of later registrations.
 - `getSupportedLanguages`, `unregister`, and language-file resolution.
 - Delegation of `analyzeFile` and `resolveImports` to the correct plugin, including handling of optional `resolveImports`.
- **Smoke test** (R197-R228) registers all parsers via `registerAllParsers` and verifies that each parser returns a non-null `StructuralAnalysis` for minimal content across a variety of file types (Markdown, YAML, JSON, TOML, `.env`, Dockerfile, SQL, GraphQL, Proto, Terraform, Makefile, shell script).

Impact

- Adds 228 lines of test code, expanding coverage of `PluginRegistry` behavior.
- Provides concrete assertions for plugin lookup, delegation, and language mapping.
- The smoke test ensures that every parser can handle minimal content for its supported file types.

Risks & follow-ups

- **Regression risk:** any change to `PluginRegistry` internals (e.g., language map logic) may cause multiple tests to fail; run the full suite after refactors.
- **Snapshot drift:** if the shape of `StructuralAnalysis` changes, the smoke test may need updates; verify against current snapshots.
- **Lint/build:** ensure the new file passes the repository's TypeScript linting and build steps.

- **Performance:** the smoke test iterates over many file types; monitor CI test duration to avoid timeouts.
