

packages/graph-core/src/__tests__/search.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T06:00:39.572Z

Overview

A new test file `packages/graph-core/src/__tests__/search.test.ts` (lines R1-158) has been added. It imports `vitest` helpers, `SearchEngine`, and the `GraphNode` type, then defines a `makeNode` helper (R5-R10) that supplies default values for `type`, `summary`, `tags`, and `complexity`. A sample graph of seven nodes (`sampleNodes`, R13-57) covers files, classes, and functions with diverse tags.

Key changes

- **Imports:** `vitest` (R1), `SearchEngine` (R2), `GraphNode` type (R3).
- **Test data helper:** `makeNode` creates fully-formed `GraphNode` objects (R5-R10).
- **Sample nodes:** seven nodes spanning `file`, `class`, and `function` types (R13-57).
- **Behavioral tests** (R59-158):
 - Empty query returns `[]` (R60-64).
 - Exact name match (R66-71).
 - Fuzzy name match (R73-78).
 - Cross-field search on `summary` (R80-85) and `tags` (R87-94).
 - Name matches rank higher than summary matches (R96-102).
 - Scores are normalized between 0 and 1 (R104-112).
 - `updateNodes` re-indexes and includes new nodes (R114-137).
 - Type filtering (`types: ["function"]`) (R139-150).
 - Limit option (`limit: 1`) (R153-157).

Impact

- **Coverage:** Provides comprehensive checks of `SearchEngine`'s public API, guarding against regressions in scoring, filtering, and re-indexing.
- **Maintainability:** Centralized `makeNode` reduces duplication for future node additions.
- **No API change:** Only test code; production exports remain unchanged.

Risks & follow-ups

- **Regression risk:** If the scoring algorithm or field indexing changes, several tests may fail. Run the full suite after core refactors.
- **Test fragility:** Defaults in `makeNode` (e.g., `type: "file"`) could mask missing fields in real data; verify that production nodes supply required properties.
- **Coverage gaps:** The suite does not exercise very large node sets or special characters; consider adding stress tests if performance tuning is planned.
