

packages/graph-core/src/analyzer/graph-builder.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:40:26.009Z

Overview

A new test file `packages/graph-core/src/analyzer/graph-builder.test.ts` (lines R1-R404) has been added. It imports `vitest` helpers, `GraphBuilder`, and the `StructuralAnalysis` type, and exercises the builder's public API.

Key changes

- **Imports added** (R1-R3): ```ts import { describe, it, expect, vi } from "vitest"; import { GraphBuilder } from "../graph-builder.js"; import type { StructuralAnalysis } from "../types.js";`
- ```- **File node tests** (R5-R23): verify addFile creates nodes with correct id, type, name, filePath, summary, tags, and complexity.`
- **Structural analysis tests** (R41-R93): `addFileWithAnalysis` is exercised for functions, classes, and the resulting `contains` edges.
- **Edge tests** (R95-R178): import, call, and contains edges are asserted for correct source/target IDs and types.
- **Project metadata** (R180-R203): `build()` populates `project` fields (`name`, `gitCommitHash`, `languages`, `analyzedAt`) and defaults (`version`, `layers`, `tour`).
- **Language detection** (R205-R214, R216-R339): tests cover polyglot projects, non-code extensions, and the `EXTENSION_LANGUAGE` map.
- **Non-code file support** (R216-R403): tests for documents, definitions, services, endpoints, resources, steps, duplicate ID handling, and console warnings.

Impact

- **Correctness:** The tests assert the expected graph structure for a wide range of inputs, providing a safety net for future changes.
- **Documentation:** The test file serves as living documentation of the `GraphBuilder` API.
- **Observability:** Console warnings for unknown kinds or duplicate IDs are explicitly verified.

Risks & follow-ups

- **Test failures:** Any change to the builder's logic may cause many assertions to fail; run the suite and adjust implementation or tests.
- **Ordering sensitivity:** The tests rely on specific node/edge ordering; changes could affect stability.
- **Linting:** Ensure the new file passes the repository's TypeScript linting rules (`npm run lint`).
- **Performance:** The suite is large; monitor CI run times and consider splitting it if build times grow.
