Overview

A new test file `packages/graph-core/src/persistence/persistence.test.ts` (lines R1-R204) has been added to exercise the persistence layer's read/write functions for knowledge graphs, meta data, fingerprints, and configuration.

Key changes

- **Imports** (lines R1-R6):
 - `vitest` helpers (`describe` , `it` , `expect` , `beforeEach` , `afterEach`).
 - Node utilities (`mkdtempSync` , `rmSync` , `existsSync` , `join` , `tmpdir` , `writeFileSync`).
 - Persistence API (`saveGraph` , `loadGraph` , `saveMeta` , `loadMeta` , `saveFingerprints` , `loadFingerprints` , `saveConfig` , `loadConfig`).
- **Sample data:**
 - `sampleGraph` (type `KnowledgeGraph`) defined at lines R21-R68.
 - `sampleMeta` (type `AnalysisMeta`) at lines R70-R75.
 - `sampleFingerprints` (type `FingerprintStore`) at lines R140-R156.
- **Test cases** (lines R77-R203):
 - Verify file creation and round-trip integrity for each persistence function.
 - Confirm `load*` returns `null` when the expected file is missing.
 - Check error handling for an invalid graph (`project: null`) and for corrupted JSON files.
 - Validate that `loadConfig` falls back to `{ autoUpdate: false, outputLanguage: "en" }` when `config.json` is absent or malformed.

Impact

- **Correctness:** Tests confirm that serialization and deserialization work for all persistence APIs.
- **Maintainability:** Centralized sample data and expectations make future API changes easier to detect.
- **Observability:** Failure points are clear for missing files, validation errors, and corrupted data.

Risks & follow-ups

- **Regression risk:** Any change to the signatures of `save*` / `load*` will cause these tests to fail; run `npm test` after refactors.
- **Default config drift:** Verify that `loadConfig` still returns the expected defaults when `config.json` is missing or corrupted.
- **File system permissions:** Tests create temporary directories; ensure CI environments allow write access.

- **Performance:** Temporary directory creation/deletion may affect CI runtime; monitor for slowdowns.
