

packages/graph-view/src/EmbedDashboardPanel.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:17:02.780Z

Overview

A new file `packages/graph-view/src/EmbedDashboardPanel.tsx` adds an embed dashboard panel. It imports React hooks, `ReactFlowProvider`, Flow CSS, `GraphIssue` type, `DashboardContent`, `useDashboardStore`, `ThemeProvider`, and `NOVADIFF_EMBED_THEME`. The panel renders dashboard content inside a resizable container.

Key changes

- **Imports (R5-R10):** added `useEffect`, `useRef`, `useState` from React; `ReactFlowProvider` from `@xyflow/react`; Flow CSS; `GraphIssue` type; `DashboardContent`; `useDashboardStore`; `ThemeProvider`; `NOVADIFF_EMBED_THEME`.
- **EmbedSizedDashboard (R16-R63):** new component that measures its host div with a `ResizeObserver` and passes `width / height` to `ReactFlowProvider`.
- **EmbedDashboardPanelProps (R64-R68):** interface exposing optional `accessToken` and `graphIssues`.
- **EmbedDashboardPanel (R69-R95):** uses `useDashboardStore` to get `graph`; wraps content in `ThemeProvider`; conditionally renders `EmbedSizedDashboard` with `DashboardContent` or a loading overlay.

Impact

- **Bundle size:** includes `@xyflow/react` and its CSS.
- **Performance:** `ResizeObserver` may trigger frequent updates; dimensions are memoized.
- **Styling:** Flow CSS import is required; missing it will break layout.
- **API surface:** new component and props must be imported from the new file.

Risks & follow-ups

- Verify `@xyflow/react` is a dependency and its CSS is bundled.
- Ensure `useDashboardStore` provides a `graph` before rendering; otherwise the overlay may flicker.
- Test the component with `NOVADIFF_EMBED_THEME` in light and dark modes.
- Confirm `ro.disconnect()` runs on unmount to avoid memory leaks.
