

packages/graph-view/src/EmbedGraphPanel.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:17:43.146Z

Overview

A new file `packages/graph-view/src/EmbedGraphPanel.tsx` adds a fully-interactive graph embed for NovaDiff documentation. It renders a responsive React Flow graph inside a themed host and provides Escape-key navigation to the overview layer.

Key changes

- **Imports (R6-R11):** `useEffect`, `useRef`, `useState` from `React`; `ReactFlowProvider` from `@xyflow/react`; CSS import; `GraphViewInner`; `useDashboardStore`; `ThemeProvider`.
- **Type definition (R13):** `FlowDimensions` tracks host width/height.
- `**`EmbedEscapeTo`

Overview

`(R15-R30)**:` Listens for `Escape` key and triggers `navigateTo`

Overview

`when` `navigationLevel` is `"layer-detail"`.

- **`EmbedSizedInteractiveGraph` (R32-R79):** Uses a `ResizeObserver` to keep `dimensions` in sync with the host element, wrapping `GraphViewInner` in a `ReactFlowProvider`.
- **`EmbedGraphPanel` export (R81-R97):** Pulls the current graph from the dashboard store, conditionally renders the sized graph or a loading overlay, and scopes them with `ThemeProvider`.

Impact

- Adds dependency `@xyflow/react` and its CSS; must be available in the environment.
- Introduces a global key listener and a `ResizeObserver`; both are cleaned up on unmount.
- Requires CSS classes `embed-graph-flow-host`, `embed-graph-flow-pane`, `embed-graph-layout-overlay`, etc.; missing styles will break layout.
- Relies on `useDashboardStore` for graph data and navigation state.

Risks & follow-ups

- Verify that `@xyflow/react` and its CSS are installed.
- Ensure the global Escape listener does not interfere with other components or tests.
- Confirm that the referenced CSS classes are defined in the shared stylesheet.

- The component is exported but not referenced in this diff; add a usage test or integration point to validate end-to-end functionality.
