

packages/graph-view/src/NovaDiffGraphExplorer.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:18:23.750Z

Overview

A new `NovaDiffGraphExplorer.tsx` component is added to `packages/graph-view/src`. It exposes the public API `NovaDiffGraphExplorerProps` (lines 21-33) and `NovaDiffGraphDiffOverlay` (lines 16-20), and implements both an embedded and a full graph explorer mode.

Key changes

- **Imports** (R1-R6): added React hooks, `validateGraph`, type imports (`GraphIssue`, `KnowledgeGraph`), and the local `useDashboardStore`.
- **Public interfaces** (R16-R21): declare the overlay and props shapes.
- **Entry point** (R34-R42): `NovaDiffGraphExplorer` dispatches to `NovaDiffGraphExplorerEmbed` or `NovaDiffGraphExplorerFull` based on `embedMode`.
- **Fingerprinting** (R44-R53): `graphFingerprint` builds a deterministic string to skip re-validation when the graph hasn't changed.
- **Full explorer logic** (R56-R146):
 - Validates the graph with `validateGraph`; updates the store (`setGraph`, `setDiffOverlay`) and view mode.
 - Handles diff overlay updates, load errors, hydration state, and skeleton UI.
 - Provides `NovaDiffEmbedContext` and `ThemeProvider` to child components.

Impact

- Immediate validation of incoming graphs; clear error messages for invalid data.
- Centralizes graph handling; separates embed logic.
- Fingerprint caching avoids redundant validation on unchanged graphs.
- Skeleton UI and error paragraph give users feedback during loading or failure.

Risks & follow-ups

- **Validation contract:** ensure `validateGraph` returns the expected shape; otherwise store updates may fail.
- **Store side-effects:** `useDashboardStore` mutations (`setGraph`, `setDiffOverlay`, view mode switches) must be idempotent; test repeated renders.
- **Embed mode toggle:** verify `embedMode` correctly routes to `NovaDiffGraphExplorerEmbed`; regression could break embedded deployments.
- **Type safety:** `Omit<NovaDiffGraphExplorerProps, "embedMode">` assumes no other required props are omitted; future prop additions could break the signature.
