

packages/graph-view/src/NovaDiffGraphExplorerEmbed.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:19:22.061Z

Overview

A new file `packages/graph-view/src/NovaDiffGraphExplorerEmbed.tsx` introduces an **embed-only graph explorer** component that loads a `KnowledgeGraph` into the dashboard store, validates it, and renders an `EmbedDashboardPanel` without the full dashboard chrome.

Key changes

- **Imports:** Adds React hooks, `validateGraph` from `@novadiff/graph-core/schema`, `KnowledgeGraph` type, `useDashboardStore`, context utilities, and `I18nProvider`.
- **API surface:** Exports `NovaDiffGraphExplorerEmbedProps` and the `NovaDiffGraphExplorerEmbed` function.
- **Graph fingerprinting:** Implements `graphFingerprint` (lines 23-32) to avoid re-loading identical graphs.
- **Store interaction:** On mount, validates the graph, sets it in the store, configures view mode (`knowledge` vs `structural`), and enters embed depth. On unmount, cleans up tour, overlays, layout issues, and resets embed depth.
- **Rendering logic:** Shows a validation error, a skeleton while the store loads the graph, or the `EmbedDashboardPanel` wrapped in `NovaDiffEmbedContext.Provider` and `I18nProvider`.

Impact

- **Correctness:** Validates incoming graphs before use, preventing malformed data from propagating.
- **Maintainability:** Centralizes embed-specific store actions; future changes to embed behavior can be made in this file.
- **Performance:** Fingerprinting reduces unnecessary store updates when the same graph is re-passed.
- **Observability:** Provides clear error messages (`novadiff-graph-load-error`) and a skeleton UI during loading.

Risks & follow-ups

- **Store API compatibility:** Ensure `useDashboardStore` exposes `stopTour`, `resetEmbedOverlays`, `clearLayoutIssues`, `setGraph`, `setViewMode`, `setIsKnowledgeGraph`, and `enterNovaDiffEmbedDepth`.
- **Validation side-effects:** Verify that `validateGraph` does not mutate the graph and that its `issues` are correctly passed to `EmbedDashboardPanel`.
- **Cleanup correctness:** Confirm that the unmount effect restores the store to a clean state, especially `enterNovaDiffEmbedDepth` which may alter navigation depth.

- **Internationalization:** Test that `I18nProvider` correctly applies `outputLanguage` and that the component renders in non-English locales.
