

packages/graph-view/src/components/DomainClusterNode.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T06:06:09.897Z

Overview

A new `DomainClusterNode` component is added to the graph view, introducing a dedicated node type for domain clusters. It renders cluster metadata, handles selection and navigation via the dashboard store, and connects to the flow graph with XYFlow handles.

Key changes

- **Imports:** Added `memo` from React, `Handle / Position` and `Node / NodeProps` from `@xyflow/react`, and `useDashboardStore` from the local store.
- **Data contract:** Defined `DomainClusterData` interface (label, summary, entities, flowCount, businessRules, domainId) and exported `DomainClusterFlowNode` type.
- **Component:** `DomainClusterNode` receives `NodeProps<DomainClusterFlowNode>`, uses store selectors (`navigateToDomain`, `selectedNodeId`, `selectNode`), and renders UI with conditional entity list and flow count.
- **Handles:** Adds target and source handles positioned left/right with custom styling.
- **Memoization:** Exports `memo(DomainClusterNode)` to avoid unnecessary re-renders.

Impact

- **Correctness:** New node type must be registered in the graph flow configuration; otherwise it will not appear.
- **Maintainability:** Centralizes cluster node logic; future UI tweaks can be made in one place.
- **Performance:** `memo` reduces re-renders when unrelated props change.
- **Compatibility:** Requires existing store selectors; if they change, this component will break.
- **Observability:** No new logs or metrics, but UI changes may affect user interaction flow.

Risks & follow-ups

- Verify that `useDashboardStore` exposes `navigateToDomain`, `selectedNodeId`, and `selectNode`; missing selectors will cause runtime errors.
- Ensure `DomainClusterFlowNode` is added to the graph node type registry; otherwise the component will never render.
- Confirm CSS classes (`border-accent`, `bg-accent/10`, etc.) exist in the theme; missing classes could break styling.
- Run unit tests for the new component and integration tests for graph rendering to catch any regressions.
