

packages/graph-view/src/index.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:20:31.879Z

Overview

A new entry point `packages/graph-view/src/index.ts` has been added.

The file re-exports the `NovaDiffGraphExplorer` component and its related types from `./NovaDiffGraphExplorer`.

Key changes

- **File added:** `packages/graph-view/src/index.ts` (lines R1-R5).
- **Exports added:** ```ts export { NovaDiffGraphExplorer } from './NovaDiffGraphExplorer'; export type { NovaDiffGraphExplorerProps, NovaDiffGraphDiffOverlay, } from './NovaDiffGraphExplorer';`

Impact

- Provides a public API surface for the graph view; consumers can import ``NovaDiffGraphExplorer``, ``NovaDiffGraphExplorerProps``, and ``NovaDiffGraphDiffOverlay`` directly from the package.
- The new file must be included in the TypeScript compilation (e.g., via ``tsconfig.json``) and referenced in the package's ``exports`` field if conditional exports are used.
- No runtime behavior of existing modules is altered; the change is purely an API addition.
- Documentation should be updated to reflect the new exports.

Risks & follow-ups

- Verify that ``packages/graph-view/package.json`` lists the new file in its ``exports`` or ``main`` field.
- Run the test suite to confirm that importing ``NovaDiffGraphExplorer`` and its types works without type errors.
- Ensure that the added types do not shadow existing symbols and that consumers can reference them without conflict.
