

packages/graph-view/src/locales/ko.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:36:10.522Z

Overview

A new locale file `packages/graph-view/src/locales/ko.ts` has been added.

It defines a `const ko = { ... }` object containing Korean translations for the graph-view UI and ends with `export default ko;` (line 272).

Key changes

- **File addition:** `packages/graph-view/src/locales/ko.ts` (lines 1-272).
- **Export:** The file exports the locale object as the default export.
- **Content:** The object includes ~270 key/value pairs covering common UI text, project overview, node info, filters, and more.
- **No other code changes:** The diff introduces only this new file.

Impact

- Adds Korean language support for the graph-view component.
- The locale follows the same shape as other language files, so it can be imported by the i18n system without further changes.
- Existing unit tests that check locale completeness may need to include `ko`.
- The file will be compiled by the TypeScript compiler and bundled in the production build.

Risks & follow-ups

- **i18n loader configuration:** Verify that the build system automatically includes `ko.ts`; otherwise the locale may be omitted.
- **Missing keys:** Ensure all UI keys are present in `ko`.
- **Runtime fallback:** Confirm that the application falls back to English when the user's locale is not Korean, preventing `undefined` strings.
- **Documentation:** Update any README or developer docs that list supported locales to include `ko`.
