

packages/graph-view/src/locales/zh-TW.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:36:34.952Z

Overview

A new locale file `packages/graph-view/src/locales/zh-TW.ts` has been added. It contains Traditional Chinese translations for the Graph View UI.

Key changes

- **Exported object:** `export const zhTW = { ... }` (lines 1–270) defines all translation strings.
- **Default export:** `export default zhTW;` (line 272) makes the object available as the module's default.
- The object covers common UI elements, node info, filters, panels, and edge labels.

Impact

- **Internationalization:** The module now provides a `zhTW` locale that can be imported by the `i18n` loader.
- **Build:** The file is pure data; compilation and bundle size are unaffected.
- **Testing:** Existing `i18n` tests should verify that `zhTW` contains the required keys.
- **Documentation:** Add `zh-TW` to any locale registry or README listing supported languages.

Risks & follow-ups

- **Missing keys:** Verify that every key used in the UI is present in `zhTW`; missing entries could fall back to English.
- **Locale registration:** Ensure the new file is imported and registered in the locale configuration; otherwise the UI will not switch to Traditional Chinese.
- **Consistency:** Run a diff against the English locale to confirm that all translations are present and correctly mapped.
- **Performance:** No measurable impact is expected, but confirm that the added file does not trigger unnecessary re-renders in the `i18n` provider.
