

packages/graph-view/src/themes/novadiffEmbed.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:38:22.186Z

Overview

A new file, `packages/graph-view/src/themes/novadiffEmbed.ts`, has been added. It defines a locked theme for NovaDiff documentation embeds.

Key changes

- **Import (R1):** `import type { ThemeConfig } from "./types.ts";`
- **Comment (R3):** "Locked theme for NovaDiff documentation embed (matches host App.css tokens)."
- **Export (R4):** `export const NOVADIFF_EMBED_THEME: ThemeConfig = { ... }`
- **Theme properties (R5-R7):**
 - `presetId: "dark-ocean"`
 - `accentId: "purple"`
 - `headingFont: "sans"`

Impact

- The theme is type-safe via `ThemeConfig`.
- Centralizes configuration; future changes can be made in a single file.
- No existing code is altered, so no breaking changes are introduced.
- The file contains only a constant export—no runtime side effects.

Risks & follow-ups

- **Usage verification:** unknown from the available diff/scan evidence; confirm that `NOVADIFF_EMBED_THEME` is imported where documentation embeds are rendered.
- **Token alignment:** unknown from the available diff/scan evidence; ensure the preset, accent, and font match the host `App.css` tokens.
- **Documentation:** update any relevant docs or README sections to reference the new export.
- **Linting:** run the repo's linting suite to verify no style violations in the new file.
