

packages/graph-view/src/themes/presets.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:38:57.879Z

Overview

A new file `packages/graph-view/src/themes/presets.ts` was added. It defines theme presets and helper functions for the graph view component.

Key changes

- Import of types: `import type { AccentSwatch, ThemePreset } from "../types.ts";` (line 1).
- Accent swatch constants: `DARK_ACCENT_SWATCHES` and `LIGHT_ACCENT_SWATCHES` (lines 3-23).
- Preset collection: `export const PRESETS: ThemePreset[]` (lines 25-171) lists eight presets with dark/light variants and associated accent swatches.
- Utility functions:
 - `export function getPreset(id: string)` (lines 173-175) returns the preset with the given id or falls back to the first preset.
 - `export function getAccent(preset: ThemePreset, accentId: string)` (lines 177-183) returns the matching accent swatch, or falls back to the preset's default accent, or the first swatch.

Impact

- The fallback logic in `getPreset` and `getAccent` prevents undefined values when an id is missing.
- Centralizing theme data reduces duplication; new themes can be added by extending `PRESETS`.
- No existing modules are modified; the file is purely additive.

Risks & follow-ups

- Verify that other modules import the correct relative path (`../themes/presets.ts`).
- Add unit tests for `getPreset` and `getAccent` to confirm fallback behavior.
- If the preset list grows, consider memoizing lookups to avoid repeated linear scans.
- Ensure `ThemePreset` and `AccentSwatch` definitions in `../types.ts` remain compatible with the new data structure.
