

packages/graph-view/src/themes/types.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:39:54.946Z

Overview

A new file `packages/graph-view/src/themes/types.ts` (added lines R1-R36) introduces a type system for graph-view themes and a default configuration.

Key changes

- `PresetId` (`"dark-gold" | "dark-ocean" | "dark-forest" | "dark-rose" | "light-minimal"`) – supported preset identifiers.
- `AccentSwatch` – describes an accent set with `id`, `name`, `accent`, `accentDim`, `accentBright`.
- `ThemePreset` – bundles preset metadata, color map, accent swatches, and default accent ID.
- `HeadingFont` – restricts heading fonts to `"serif" | "sans" | "mono"`.
- `ThemeConfig` – runtime theme settings: `presetId`, `accentId`, optional `headingFont`.
- `DEFAULT_THEME_CONFIG` – baseline config (`presetId: "dark-gold", accentId: "gold"`).

Impact

- **API surface expansion** – consumers can import and type theme logic with the new symbols.
- **Centralized defaults** – `DEFAULT_THEME_CONFIG` offers a single source for initial theme values.
- **No breaking changes** – the file is added; existing code is unaffected unless it imports from this path.
- **Stronger typing** – the new interfaces reduce runtime errors when handling presets or accents.
- **No runtime cost** – only type declarations and a small constant are present.

Risks & follow-ups

- **Missing imports** – verify modules that use theme data import from `packages/graph-view/src/themes/types.ts`.
- **Test coverage** – update tests that rely on theme configuration to reference `DEFAULT_THEME_CONFIG` or the new interfaces.
- **Documentation** – update README or internal docs to reflect `PresetId` and `ThemeConfig`.
- **Future extensions** – adding new presets requires updating the `PresetId` union to maintain type safety.
