

packages/graph-view/src/vite-env.d.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:22:35.205Z

Overview

A new TypeScript declaration file has been added to the `graph-view` package: `packages/graph-view/src/vite-env.d.ts`. The file contains a single line: ```ts ///`

Key changes

- **File addition**: `packages/graph-view/src/vite-env.d.ts` now exists.
- **Reference line**: `/// <reference types="vite/client" />` is inserted at the top of the file.
- No other files or symbols were modified.

Impact

- **Type safety**: The reference exposes Vite's global types (e.g., `import.meta.env`) to the TypeScript compiler for the `graph-view` package.
- **Build configuration**: The file will be automatically included if the package's `tsconfig.json` (or the root `tsconfig`) includes the `src` directory; otherwise it may need to be added to the `include` array.
- **Runtime**: No runtime code is added; the change is compile-time only.

Risks & follow-ups

- **Missing inclusion**: Verify that `packages/graph-view/tsconfig.json` (or the root `tsconfig`) includes `src/**/*.d.ts`; otherwise the reference will be ignored.
- **Duplicate type definitions**: Ensure no other declaration files reference `vite/client` in a conflicting way, which could cause duplicate-definition errors.
- **Linting**: Run `tsc --noEmit` and the project's linting suite to confirm no new type errors appear.
- **CI build**: Confirm that the CI pipeline still passes the production build after adding the file.
