

public/tauri.svg

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:13:18.336Z

Overview

A new SVG asset, `public/tauri.svg`, has been added. The file defines a 206 × 231 viewBox and contains several `<path>` elements and an `<ellipse>` that together form a graphic.

Key changes

- **File addition:** `public/tauri.svg` now exists in the public directory.
- **SVG content:**
 - `<svg width="206" height="231" viewBox="0 0 206 231" ...>`
 - A complex `<path>` (lines 1–2) for the main shape.
 - An `<ellipse>` centered at (84.1426, 147) with a blue fill (line 3).
 - Two additional `<path>` elements with `fill-rule="evenodd"` for decorative details (lines 4–5).
- **No code changes:** The diff contains only the new file; no TypeScript or CSS files were modified.

Impact

- **Build output:** The asset will be part of the public folder and can be referenced as `/tauri.svg`.
- **Bundle size:** Adds a few kilobytes to the public assets; impact on performance is negligible.
- **Maintainability:** No new code paths or dependencies are introduced; the file is static.
- **Compatibility:** SVG is standard and should render across modern browsers and Electron/Tauri contexts.

Risks & follow-ups

- **Reference check:** Unknown from the available diff/scan evidence whether the SVG is referenced elsewhere; verify usage in UI or docs.
- **Accessibility:** The SVG lacks `aria` attributes or a `<title>`; consider adding them if used as an icon.
- **Version control:** Confirm the file is correctly committed and its path matches the intended location (`public/tauri.svg`).
- **Testing:** Run a quick smoke test to ensure the SVG renders correctly and that no build errors arise from the new asset.
