

public/vite.svg

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:13:49.758Z

Overview

A new SVG asset `public/vite.svg` was added. The file contains a single `<svg>` element with namespace declarations, `aria-hidden="true"`, `role="img"`, and class `iconify iconify--logos`. The root element starts with `width="31.88"`.

Key changes

- File added: `public/vite.svg` (line 1 added).
- SVG markup: `<svg xmlns="http://www.w3.org/2000/svg" xmlns:xlink="http://www.w3.org/1999/xlink" aria-hidden="true" role="img" class="iconify iconify--logos" width="31.88" ...>`.

Impact

- Static assets: The file resides in the public directory and will be served as a static asset.
- Accessibility: `aria-hidden="true"` marks the icon as decorative; screen readers will ignore it.
- Usage: No evidence in the diff that the icon is referenced by any component; usage remains unknown.

Risks & follow-ups

- Verify that components intended to use the icon import `public/vite.svg`; otherwise the file will be unused.
- Run a build to confirm the file is copied to the output directory.
- If the icon conveys information, remove `aria-hidden` and provide an accessible name.
- Add a smoke test that renders the icon and checks for the class `iconify iconify--logos`.
