

src/app/codebaseDocs.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:40:06.300Z

Overview

A new module `src/app/codebaseDocs.ts` is added. It exports utilities that transform a `CodebaseOutline` into plain-text prompts, Markdown reports, and Mermaid diagrams.

Key changes

- **Import:** `import type { CodebaseOutline } from "../types";` (R1).
- **File sampling:** `sampleFilePaths(outline, cap?)` (lines 3-9, R3-8).
- **Symbol sampling:** `sampleSymbolLines(outline, cap?)` (lines 11-32, R11-31).
- **Depth histogram:** `depthHistogram(outline)` (lines 34-46, R34-45).
- **Prompt context:** `buildCodebasePromptContext(...)` (lines 48-92, R48-92).
- **Markdown report:** `buildCodebaseMetricsMarkdown(...)` (lines 95-154, R95-154).
- **Mermaid pie:** `codebaseExtensionPieMermaid(outline)` (lines 157-166, R157-166).
- **Mermaid flowchart:** `codebaseDepthMermaid(outline)` (lines 169-178, R169-178).

All functions guard against missing fields with optional chaining and array checks, so they should not throw when `outline` lacks expected properties.

Impact

- Only a new file is added; no existing files are modified.
- The module exposes only the listed functions, keeping the public surface minimal.
- Importing it in production code would add the generated strings to the bundle, but the functions themselves are lightweight.

Risks & follow-ups

- **Outline shape:** Verify that `CodebaseOutline` actually contains `by_extension`, `top_directories`, `detected_projects`, `import_edges`, `cross_file_call_edges`, and `symbol_spans_by_file` to avoid `undefined` values.
- **Bundle size:** Ensure the module is imported only in tooling or dev environments to prevent unnecessary bundle growth.
- **Mermaid rendering:** Test that the strings produced by `codebaseExtensionPieMermaid` and `codebaseDepthMermaid` render correctly in downstream viewers (e.g., VSCode preview, documentation sites).
- **Runtime safety:** Run lint, tests, and the production build to confirm no TypeScript or runtime errors are introduced.
