

src/app/novadiffDocs.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:45:33.932Z

Overview

A new module `src/app/novadiffDocs.ts` was added. It defines metadata for NovaDiff documentation bundles and helper functions for UI labels and descriptions.

Key changes

- **Import** – `import type { NovadiffDocsBundleKey } from "./types";` (R1).
- **Preview pages** – `export const DOC_PREVIEW_PAGES = [ "index.html", "narrative.html", "metrics.html", "diagrams.html", "release.html" ] as const;` (R3-9).
- **Page type** – `export type DocPreviewPage = (typeof DOC_PREVIEW_PAGES)[number];` (R11).
- **Bundle keys** – `export const NOVADIFF_DOC_BUNDLES: NovadiffDocsBundleKey[] = [ "change-report", "codebase-baseline", "codebase-target" ];` (R13-17).
- **Label helper** – `export function bundleLabel(bundleKey: NovadiffDocsBundleKey): string { ... }` (R19-28).
- **Description helper** – `export function bundleShortDescription(bundleKey: NovadiffDocsBundleKey): string { ... }` (R30-39).

Impact

- Adds a single source of truth for bundle keys and preview page names.
- Exposes two new helper functions that can be used by UI components.
- No existing public API is altered; the new exports are additive.

Risks & follow-ups

- Verify that all current imports of bundle keys now reference `NovadiffDocsBundleKey` and that no hard-coded strings remain.
- Ensure `src/app/novadiffDocs.ts` is included in the build pipeline and that its exports are consumed where needed.
- Add unit tests covering `bundleLabel` and `bundleShortDescription` for each key to guard against future regressions.
- Confirm that the `DOC_PREVIEW_PAGES` array matches the actual HTML files distributed.
