

src/app/workspaceTypes.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:49:13.730Z

Overview

`src/app/workspaceTypes.ts` now exports several TypeScript interfaces that describe Git user profiles, workspace snapshots, and tooling status. The file contains only type declarations, so it does not alter runtime behavior.

Key changes

- `GitUserProfile` – added at R1 (lines 1-6).
- `WorkspaceCommitSnapshot` – added at R9 (lines 9-17).
- `NovaWorkspace` – added at R19 (lines 19-35).
- `WorkspaceUiState` – added at R37 (lines 37-42).
- `GitHistoryCompareOptions` – added at R44 (lines 44-47).
- `GhToolingStatus` – added at R49 (lines 49-60).
- `WorkspaceSessionState` – added at R62 (lines 62-67).

Each interface is exported and can be imported by other modules.

Impact

- **Type safety** – the new interfaces enforce stricter typing for workspace-related data.
- **Imports** – any module that previously used raw objects for these concepts must now import the corresponding interface; missing imports will cause compile-time errors.
- **Runtime** – the file contains only type definitions, so the bundle size and execution performance are unchanged.
- **Documentation** – existing docs should reference these interfaces to clarify data contracts.

Risks & follow-ups

- **Unused exports** – verify that all new interfaces are referenced; otherwise linting may flag them.
- **Naming collisions** – ensure no other module exports identically named interfaces that could cause import ambiguity.
- **Data consistency** – confirm that objects constructed elsewhere match the new shapes, especially optional fields such as `uiState`.
- **Future refactors** – if workspace structures evolve, these interfaces may need updates; track changes in the `src/app` module.
