

src/components/BackgroundActivityBar.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:50:28.229Z

Overview

A new component `BackgroundActivityBar` is added at `src/components/BackgroundActivityBar.tsx` (lines 1-68). It displays a live status bar for background activities, showing elapsed time and progress, and respects the user's reduced-motion preference.

Key changes

- **Imports** – `useEffect`, `useState` from `React`; `useBackgroundActivity` from `../app/BackgroundActivityContext`; `usePrefersReducedMotion` from `../app/usePrefersReducedMotion` (lines 1-3).
- **Utility** – `formatElapsed(ms)` converts milliseconds to a human-readable string (lines 5-12).
- **State & effect** – `now` state is updated every 500ms while activities exist; the interval is cleared on cleanup (lines 18-26).
- **Rendering** – For each activity, the component shows `label`, optional `detail`, elapsed time, and a progress bar that is indeterminate when `progress` is `null` (lines 32-63).
- **Accessibility** – Wrapper has `role="status"`, `aria-live="polite"`, `aria-atomic="false"`; each item uses `aria-hidden` appropriately.
- **Reduced motion** – Pulsing animation is disabled when `reduced` is true (line 44).

Impact

- The component renders only when `activities.length > 0`, avoiding unnecessary DOM updates.
- The 500ms interval runs only while activities are present, limiting overhead.
- `formatElapsed` is isolated, easing future formatting changes.
- The status bar is announced via an ARIA live region, improving screen-reader feedback.

Risks & follow-ups

- Verify that `useBackgroundActivity` provides the expected `activities` shape; missing fields could break rendering.
- Ensure CSS classes (`background-activity-bar`, `background-activity-pulse`, etc.) exist to avoid visual regressions.
- Confirm that the interval cleanup works correctly when the component unmounts or activities clear.
- Add unit tests for `formatElapsed` and the component's rendering logic to guard against future refactors.
