

src/components/DiffWorkspace.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:52:36.223Z

Overview

A new `DiffWorkspace` component is added in `src/components/DiffWorkspace.tsx`. It renders a full diff UI, handles selection of diff rows, and shows a modal for documenting the selected rows.

Key changes

- **Imports** (lines 1-16) add `MouseEvent` from `react`, types `DiffRow`, `FileDiffPayload`, `SelectionDocMode` from `../app/types`, the helper `pathDisplayLabel` from `../app/pathDisplay`, icons from `lucide-react`, and the modal component `SelectedDiffSummaryModal`.
- **DiffWorkspaceProps interface** (lines 18-58) lists all props required by the workspace, including callbacks for browsing, swapping, comparing, and selection logic.
- **DiffWorkspace function** (lines 60-370) builds the UI: path selectors, compare button, busy/compare status banner, file statistics, selected-path bar, diff panes, and the diff table rendered with `DiffTableRow`.
- **DiffTableRow helper** (lines 371-400) renders a single diff row, applies styles, and handles click selection.
- **Modal integration** (lines 353-360) mounts `SelectedDiffSummaryModal` with props for open state, label, summary, loading, error, and close handler.

Impact

- The component must be wired into the app's routing or parent component; missing props will cause runtime errors.
- It centralizes diff-related UI logic, making future changes to selection or modal behavior easier to maintain.
- Rendering many diff rows may affect scroll performance; consider virtualization if tests show slowdown.
- The component depends on existing exports: `SelectedDiffSummaryModal` and the types from `../app/types`.

Risks & follow-ups

- **Import failures:** Verify that `../app/types` exports `DiffRow`, `FileDiffPayload`, and `SelectionDocMode`.
- **Modal contract:** Ensure `SelectedDiffSummaryModal` accepts the props used; mismatches will break the modal.
- **Event handling:** `onSelectDiffRow` expects a `MouseEvent`; callers must pass the correct event type.

- **Styling:** CSS classes such as `diff-row-selected` and `diff-row-muted` must be defined; otherwise rows will appear unstyled.
