

src/components/HistoryCompareStrip.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:56:00.210Z

Overview

A new component `HistoryCompareStrip` is added at `src/components/HistoryCompareStrip.tsx` (lines 1-212). It renders a header strip that lets the user pick a base commit, a head commit or a live repository folder, swap the two, and trigger a comparison.

Key changes

- **Imports** (lines 1-7): icons `ArrowLeftRight`, `ChevronDown`, `GitBranch`, `GitCompareArrows`, `Loader2` from *lucide-react*.
- **Type imports** (lines 8-9): `WorkspaceCommitSnapshot` from `../app/workspaceTypes` and `pathDisplayLabel` from `../app/pathDisplay`.
- **Props interface** (lines 11-28): `HistoryCompareStripProps` defines arrays of commits, hash strings, live-repo flags, busy/error states, and callbacks for every user action.
- **Helpers** (lines 30-36, 38-40): `truncateSubject` trims a commit subject to 48 chars; `commitLabel` builds the display string.
- **Component** (lines 42-212):
 - Renders a title and description.
 - Provides a base-commit `<select>` (lines 98-110) and a head-commit `<select>` or live-repo `<input>` (lines 134-170).
 - Swap button (lines 118-126) and live-repo toggle checkbox (lines 180-186).
 - Compare button (lines 191-205) is disabled until `canCompare` (lines 62-66) is true.
 - Shows a loader icon when `busy` is true (lines 199-203).
 - Displays an error message if `error` is set (line 207).
 - All interactive elements include `aria-label` or `aria-hidden` attributes as shown in the diff.

Impact

- Adds a self-contained UI for commit comparison; no changes to existing components.
- Requires parent components to provide the full set of callbacks and state values.
- No new runtime dependencies beyond the imported icons and types.

Risks & follow-ups

- **Regression:** unknown from the available diff/scan evidence whether the new strip interferes with existing commit-selection logic.
- **Accessibility:** the component includes `aria-label` attributes, but comprehensive testing is not shown in the diff.
- **Testing:** unit tests for `truncateSubject`, `commitLabel`, and the enable/disable logic are not present in the current diff.

- **Linting:** running `tsc`, ESLint, and Prettier should confirm no type or style errors.
