

src/components/InsightsColumn.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:56:31.485Z

Overview

`src/components/InsightsColumn.tsx` introduces a new `InsightsColumn` component that renders a two-tab interface: **Summary** and **Files**. It displays LLM-generated file summaries, diff statistics, and a tree of changed files. A small helper `MetricPill` is defined for metric display.

Key changes

- **Imports** (lines 1-6):

```
``ts import type { FileChange, FileDiffPayload } from "../app/types";
import type { LlmSettings } from "../app/llmStorage"; import { isNovadiffDocsReservedPath }
from "../app/novadiffPaths"; import { LlmSummaryMarkdown } from
"./LlmSummaryMarkdown"; import { ChangedFilesTree } from "./ChangedFilesTree"; import {
Check, LayoutList, Loader2, Sparkles } from "lucide-react";
```
- **InsightsColumnProps** (lines 10-29): 28 properties covering tab state, file list, selection, diff payload, LLM settings, summary state, prefetch status, and callbacks.
- **UI logic** (lines 31-290):
 - Tab switching via `onTab`.
 - **Summary tab**: shows an overview paragraph, a key-changes list, a button to request a file summary, a prefetch progress bar, the rendered Markdown summary, and diff statistics with confidence badges.
 - **Files tab**: renders `<ChangedFilesTree rows={rows} ... />`.
- **MetricPill** (lines 293-308): renders a label/value/tone pill.

Impact

- **Build**: Requires `lucide-react` and the LLM components (`LlmSummaryMarkdown` , `ChangedFilesTree`).
- **Type safety**: All props are required; missing values will cause compile errors.
- **Runtime**: The summary button is disabled when no file is selected, the path is reserved, the file count is zero, the summary is loading, or the LLM API is unavailable (`window.electronAPI`).
- **Performance**: Rendering the full file tree and summary can be heavy for large diffs; the progress bar provides visual feedback.

Risks & follow-ups

- Verify that consumers supply `llmSettings` and `diffPayload` ; otherwise the component will fail to render.
- Ensure `lucide-react` is installed to avoid build failures.

- Confirm that the UI degrades gracefully when `window.electronAPI` is missing.
