

src/components/PullRequestsWorkspace.tsx

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:59:33.339Z

Overview

A new component `PullRequestsWorkspace` is added at `src/components/PullRequestsWorkspace.tsx` (lines 1-324). It renders a UI for browsing GitHub repositories, matching local clones, and launching pull-request comparisons in the NovaDiff desktop app.

Key changes

- **Imports**
 - React hooks added at **R1**: `useCallback` , `useEffect` , `useState` .
 - Lucide icons added at **R2-9**: `ExternalLink` , `FolderGit2` , `GitPullRequest` , `Loader2` , `RefreshCw` , `Search` .
 - Type imports from `../app/gitTypes` added at **R10-15**: `GithubPullRequestSummary` , `GithubRepoSummary` , `GitToolingStatus` , `LocalRepoMatch` .
- **Props interface** (`PullRequestsWorkspaceProps`) defined at **R17-26*
- with `suggestedRepoPath` , `onOpenCompare` , `onUseRepoAsTarget` .
- **Component state** (R33-42): tooling status, repo list, selected repo, local matches, PRs, loading flags, error, repo filter, busy PR.
- **Callbacks**
 - `refreshTooling` (R46-68) queries `window.electronAPI.gitDetectTooling` and, if logged in, `githubListRepos` .
 - `resolveLocal` (R74-87) calls `gitMatchLocalRepo` .
 - `selectRepo` (R89-112) loads PRs via `githubListPrs` and local matches.
 - `openPrCompare` (R115-142) invokes `githubPrCompareRoots` and triggers `onOpenCompare` .
- **UI**
 - Header with refresh button (R165-178).
 - Status cards (R185-197).
 - Error display (R200).
 - Repository list with search (R215-242).
 - PR panel showing local matches and compare button (R245-319).

Impact

- The component depends on `window.electronAPI` ; missing methods will surface as runtime errors.
- Centralizes PR-workspace logic, making future refactors easier.
- Rendering large repo or PR lists may cause many re-renders; pagination or memoization could improve performance.

Risks & follow-ups

- **Electron API availability:** confirm that `gitDetectTooling` , `githubListRepos` , `githubListPrs` , `gitMatchLocalRepo` , and `githubPrCompareRoots` exist and return the expected shapes.
- **Type safety:** ensure imported types match actual API responses to avoid runtime failures.
- **UI responsiveness:** test with large data sets to verify no layout thrashing.
- **Accessibility:** icons use `aria-hidden` ; verify that interactive elements remain accessible to screen readers.
