

src/components/onboarding/onboarding.css

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T05:10:29.544Z

Overview

`src/components/onboarding/onboarding.css` has been added.

The file contains 262 new lines that style the onboarding overlay, welcome screens, workspace hub, and related UI components.

Key changes

- **Overlay** – `.onboarding-overlay` (lines 1-12) is defined with `position: fixed; inset: 0; z-index: 12000;` and flex centering.
- **Screen layout** – `.welcome-screen` and `.workspace-hub` (lines 14-18) share a max-width of `min(720px, 100%)` and are centered.
- **Cards & avatars** – `.welcome-user-card`, `.welcome-user-avatar`, and related classes (lines 50-70) set flex layouts, padding, borders, and hover effects.
- **Responsive grid** – `.git-history-pickers` (lines 177-182) switches from two columns to one on screens ≤ 640 px (media query lines 184-188).
- **Animation** – `.spin-ic` (lines 221-225) uses a `spin-ic` keyframe animation (lines 227-231).
- **Additional UI** – New classes for device code blocks, consent prompts, and local-only dividers appear (lines 126-262).

Impact

- **UI correctness** – The overlay's high `z-index` (12000) may cover other elements; no evidence of interaction handling is present.
- **Maintainability** – Styles are scoped to component classes, limiting global leakage.
- **Performance** – No heavy selectors or animations that could degrade rendering; the file is ~262 lines of straightforward CSS.
- **Compatibility** – Uses modern CSS (`color-mix`, `inset`) without fallbacks; support depends on target browsers.

Risks & follow-ups

- **Regression** – Unknown from the diff; run onboarding flow tests to ensure the overlay does not interfere with existing modals or tooltips.
- **Responsiveness** – Verify the two-column to single-column transition at 640px (media query lines 184-188).
- **Browser support** – Confirm `color-mix` and `inset` are supported or polyfilled in the target browsers.
- **Test coverage** – Execute the nearest targeted tests and perform a manual smoke test for the overlay area.
