

tests/smoke.test.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:12:53.485Z

Overview

A new test file `tests/smoke.test.ts` has been added to the repository. It contains a basic Vitest smoke test that verifies a simple arithmetic operation.

Key changes

- **Import added** at line 1: `import { describe, expect, it } from "vitest";` (R1 added).
- **Test suite defined** at lines 3-7: `describe("toolchain", () => { ... });` (R3 added).
- **Single test case** at lines 4-5: `it("runs tests", () => { expect(1`
`1).toBe(2); });`` (R4-5 added).
- The file resides in the `tests/` directory, following existing test conventions.

Impact

- Adds a sanity check that the test runner and JavaScript engine are functioning; unlikely to affect production code.
- Provides a minimal example for future test writers, demonstrating Vitest syntax and project structure.
- Running the test suite will now include this smoke test, giving quick feedback if the test environment is misconfigured.
- Runtime impact negligible; the test executes instantly.

Risks & follow-ups

- Ensure Vitest is installed and configured; otherwise the test will fail to run.
- Run `npm run lint` to confirm the new file passes linting rules.
- No snapshots are involved, so no refresh is needed.
- Verify that the CI pipeline picks up the new test file and that it passes on all target platforms.
