

vitest.config.ts

Kind: added · Baseline: a9c34bfb03fe · Target: NovaDiff · Generated: 2026-05-20T04:11:46.775Z

Overview

A new file `vitest.config.ts` has been added. It defines a minimal Vitest configuration that targets Node-environment tests.

Key changes

- **Import** (line1): `import { defineConfig } from "vitest/config";` (R1 added).
- **Export default** (lines3-8): `export default defineConfig({ ... });` (R3 added).
- **Test options** (R4-R7):
 - `environment: "node"` (R5 added).
 - `include: ["tests/**/*.test.ts"]` (R6 added).

Impact

- The configuration will cause Vitest to run all `*.test.ts` files under the `tests/` directory using a Node environment.
- It is isolated from existing build or lint setups.
- Running tests requires the `vitest` package (and its TypeScript support) to be present in `devDependencies`.

Risks & follow-ups

- **Missing dependency:** Verify that `vitest` is listed in `devDependencies`; otherwise add it.
- **Path resolution:** Ensure that test files match the glob pattern `tests/**/*.test.ts`; adjust if tests live elsewhere.
- **Environment mismatch:** Tests that rely on browser APIs will fail under the Node environment; consider a separate config or test adjustments.
- **Build pipeline:** Confirm that CI scripts invoke Vitest (e.g., `vitest run`) so the new config is used.
